Water Scavenger Hunt

For each box, there may be one answer or many answers. As you investigate, think about what you see right now, but also what you might see as the seasons change or in different weather (sunny, rainy, snowing, fog).

Where do you/could you see water?	Where is water you can feel?
Where would you see water only after a heavy rain?	Where is water in a very high place?
Where is water you cannot see?	Where is water you can drink (without getting sick)?
Where is water moving that you can't see?	What parts of the water system are human-made?
How is water used in our community?	How did humans change how water moves through the school grounds?
